COMPONENT OF WEBSITE

Html -: *this website uses html for making all paragraph Headers, tables, and all active component like link to connect to another pages in this website html used for pictures of different dishes*

Css -: this website also take advantage of css(cascading style sheet) to make website more elegant and attractive this website uses css for decoration of all fonts , to color them , to add images with perfect ratio and lot more to Make website more attractive .

Bootstrap v.4 -: this website uses a very popular component called bootstrap which is very powerful tool in web development it have many usefull component which we use in our website like flex box, grid system, navigation bar and more important thing in we use this website to be responsive in every aspect.

Javascript -: *this website uses a powerful programming language called java we use java concept To add some logic to our website like in navigation bar so when we scroll down our website it changes its color Which is a function which we made to do that.*
